

MusicXML

Michael Good and Justin Phillips

What Is MusicXML?

- The standard format for digital sheet music interchange between applications
- Invented by Michael Good at Recordare in 2000
- Developed collaboratively by a community of hundreds of musicians and software developers over the past 12 years
- Supported by over 150 applications worldwide

The Future of MusicXML

- Essential to the future of digital sheet music
- Will continue to have an open, royalty-free license
- Will continue to develop in response to musician and software needs
 - Version 3.0 was released in 2011
 - Historically, there has been 2 3 years between major releases
- MusicXML now has a more stable corporate parent with more resources
